

# Structure-sensitive noise inference: comprehenders expect exchange errors

*Till Poppels and Roger Levy*

UCSD Linguistics

# The phenomenon

The father bought his son for a bicycle.

**literal**

**non-literal**

Was something bought for the son?

100%

0%

"No"

"Yes"

The father bought his son for a bicycle.

**literal**

**non-literal**

Was something bought for the son?

33%

66%

"No"

"Yes"

The cook baked  
Lucy for a cake.

Was something  
baked for Lucy?

47%

53%

literal

non-literal

The bartender  
poured the customer  
for a drink.

Was so  
poured  
custo

21%

79%

literal

non-literal

The apprentice  
fetched a hammer  
the carpenter.

Was something  
fetched for the  
carpenter?

33%

67%

literal

non-literal

The charity built a  
house the hurricane  
victim.

Was somethin  
built for the  
hurricane victir

25%

75%

literal

# Noisy-channel theory

Anderson (1990); Levy (2008)

# Noisy-channel theory

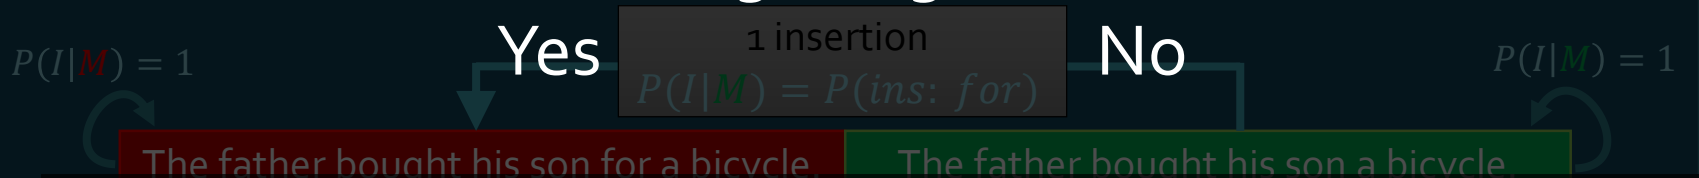

$$P(M|I) \propto \underbrace{P(I|M)}_{\text{Speaker error}} \underbrace{P(M)}_{\text{Plausibility}}$$

# Manipulating priors and likelihoods

$$P(M|I) \propto P(I|M)P(M)$$

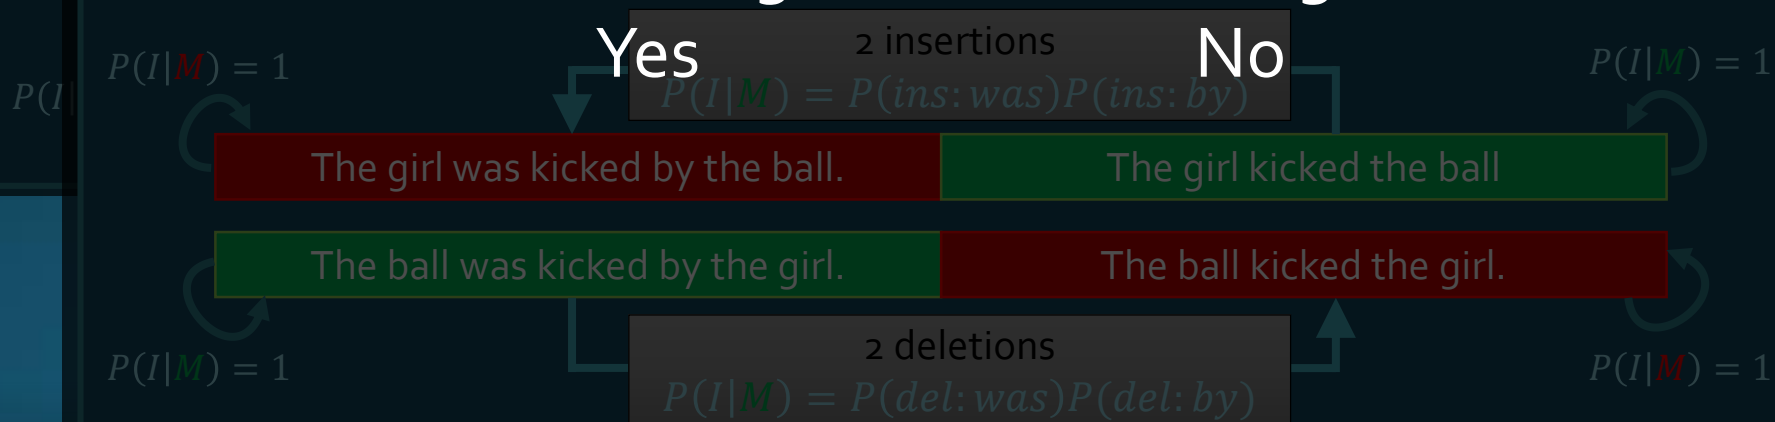

Was something bought for the son?

Did the dryer shrink something?

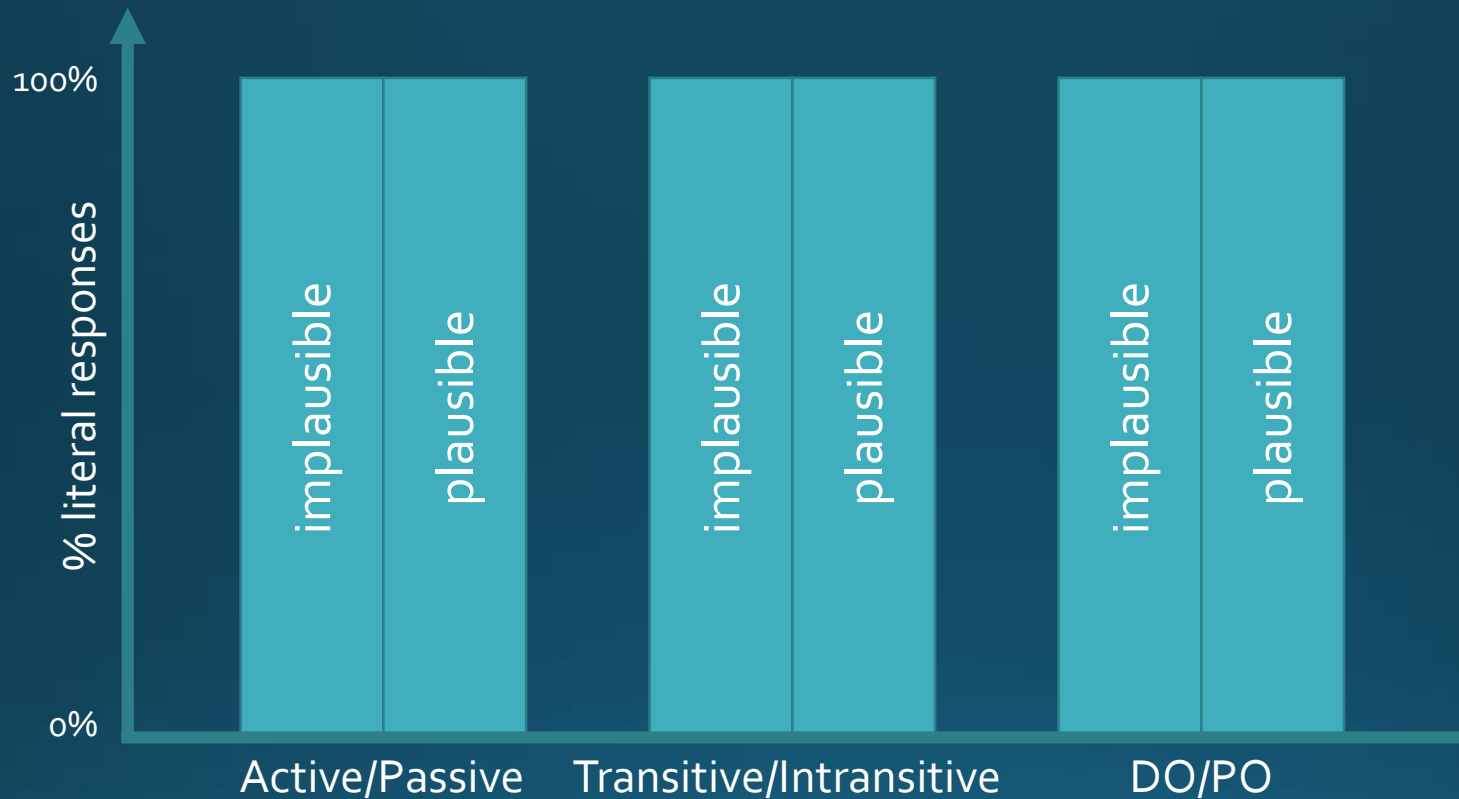

Did the girl kick something?

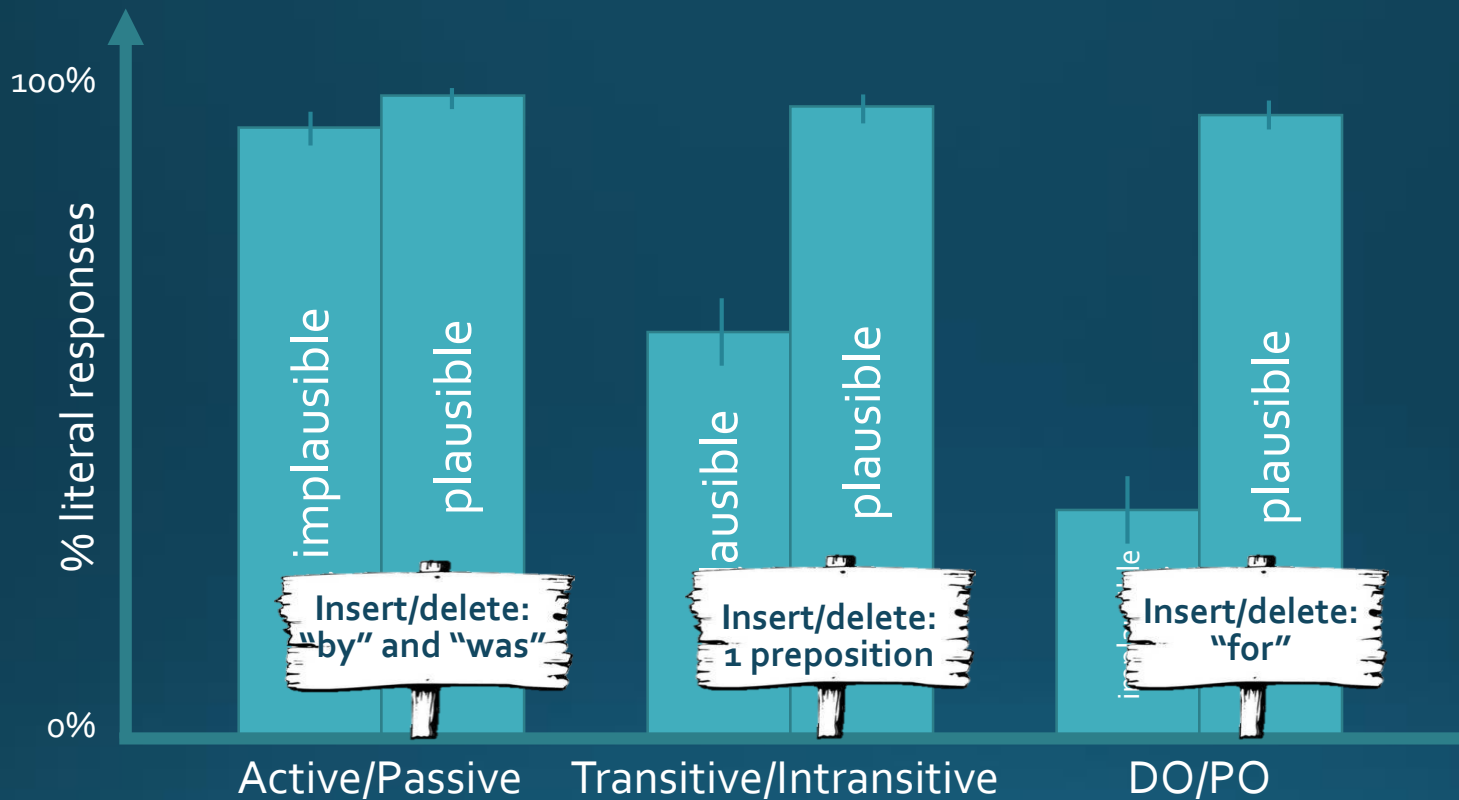

# Replicating Gibson *et al.* (2013)

# Replicating Gibson *et al.* (2013)

from to

The package fell ~~to~~ the table ~~from~~ the floor.

# The case for exchange errors

The package [pækɪdʒ] fell to the table [frɒm ðə flo:ə].

cf. "spoonerisms" (e.g. MacKay, 1970)

Waste the **t**erm → Taste the **w**erm

Fighting a **l**iar → Lighting a **f**ire

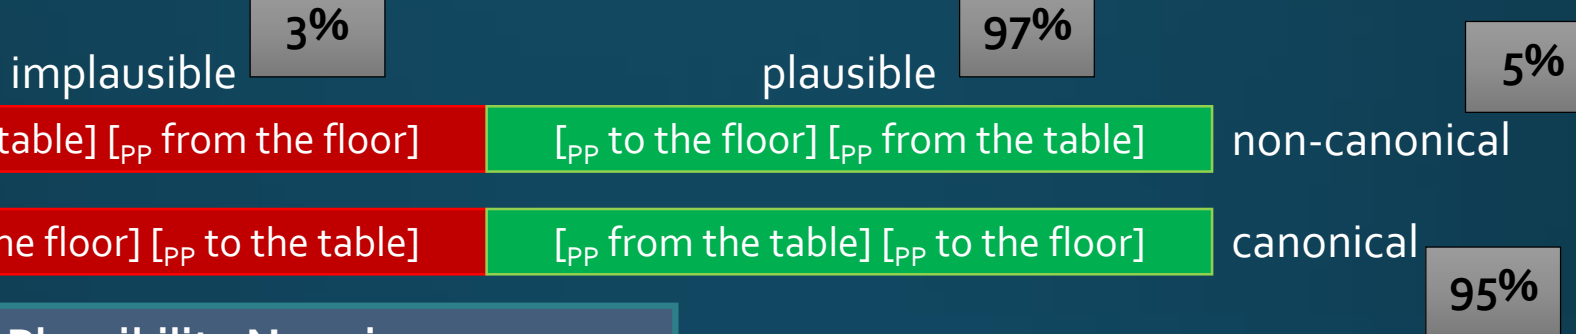

Battle ships and **c**ruisers → Cattle ships and **b**ruisers

Busy Dean → Dizzy bean

# Methods

The package [<sub>VP</sub> fell ...]

## Plausibility Norming

Please read the below event descriptions carefully.  
Which one seems **more plausible** to you?

- The package fell from the table to the floor
- The package fell from the floor to the table

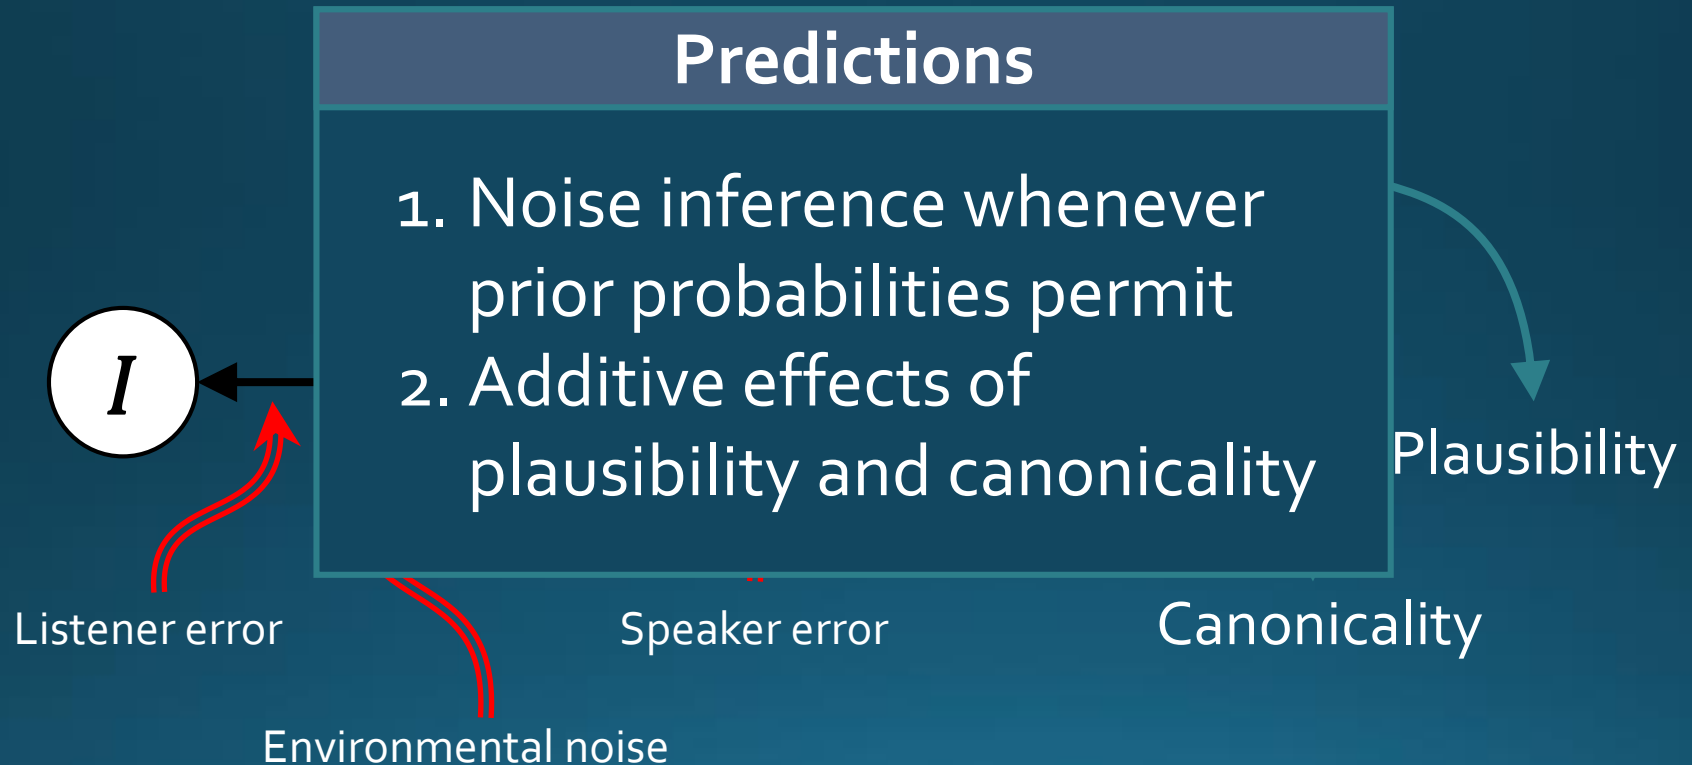

## Canonicity Norming

[<sub>PP</sub> from ...] [<sub>PP</sub> to ...] 95% - 5% [<sub>PP</sub> to ...] [<sub>PP</sub> from ...]  
[<sub>PP</sub> with ...] [<sub>PP</sub> about ...] 80% - 20% [<sub>PP</sub> about ...] [<sub>PP</sub> with ...]  
[<sub>PP</sub> to ...] [<sub>PP</sub> about ...] 81% - 19% [<sub>PP</sub> about ...] [<sub>PP</sub> to ...]  
[<sub>PP</sub> from ...] [<sub>PP</sub> about ...] 67% - 33% [<sub>PP</sub> about ...] [<sub>PP</sub> from ...]  
[<sub>PP</sub> for ...] [<sub>PP</sub> in ...] 51% - 49% [<sub>PP</sub> in ...] [<sub>PP</sub> for ...]  
[<sub>PP</sub> in ...] [<sub>PP</sub> at ...] 50% - 50% [<sub>PP</sub> at ...] [<sub>PP</sub> in ...]  
[<sub>PP</sub> at ...] [<sub>PP</sub> from ...] 49% - 51% [<sub>PP</sub> from ...] [<sub>PP</sub> at ...]

$$\text{response} \sim \text{plausibility} + \text{canonicity} \\ + (1 + \text{plausibility} + \text{canonicity} \mid \text{item}) \\ + (1 + \text{plausibility} + \text{canonicity} \mid \text{subject})$$

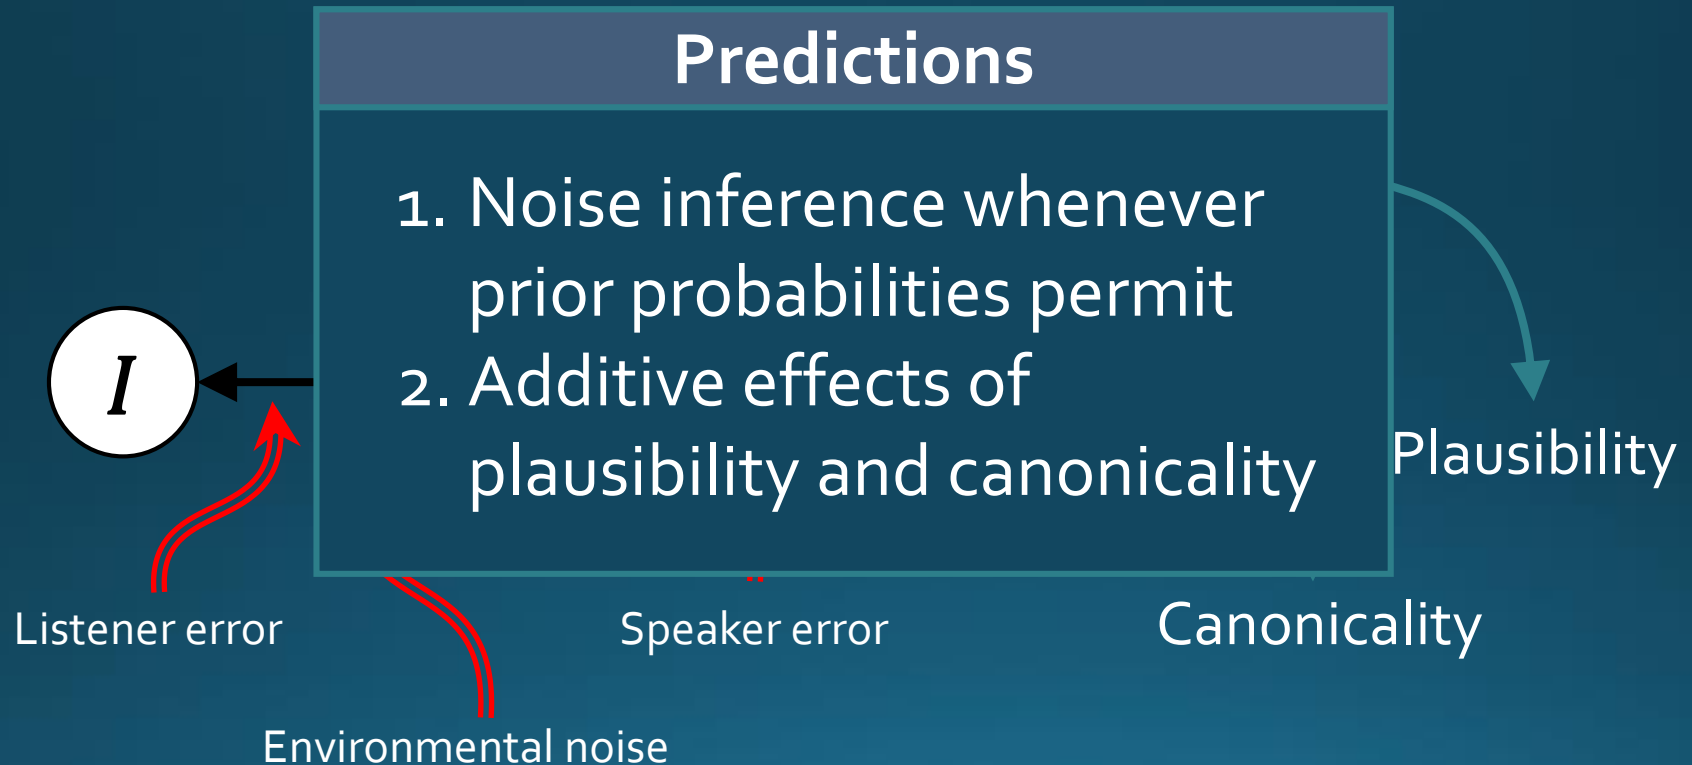

# Predictions & Results

$$P(M|I) \propto \underbrace{P(I|M)P(M)}$$

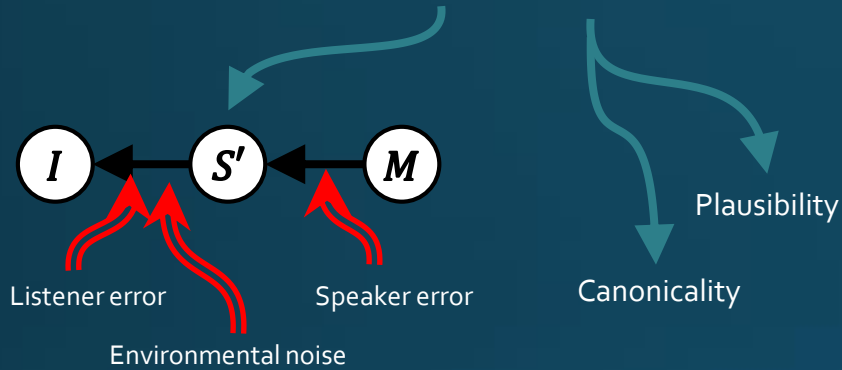

# Predictions & Results

$$P(M|I) \propto \underbrace{P(I|M)P(M)}$$

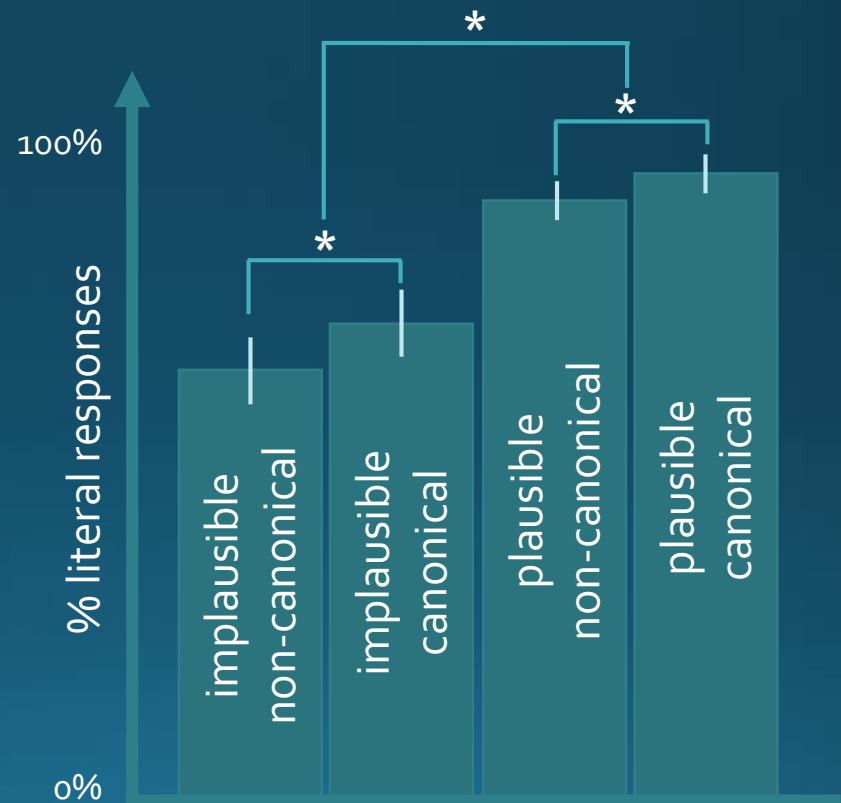

# Predictions & Results

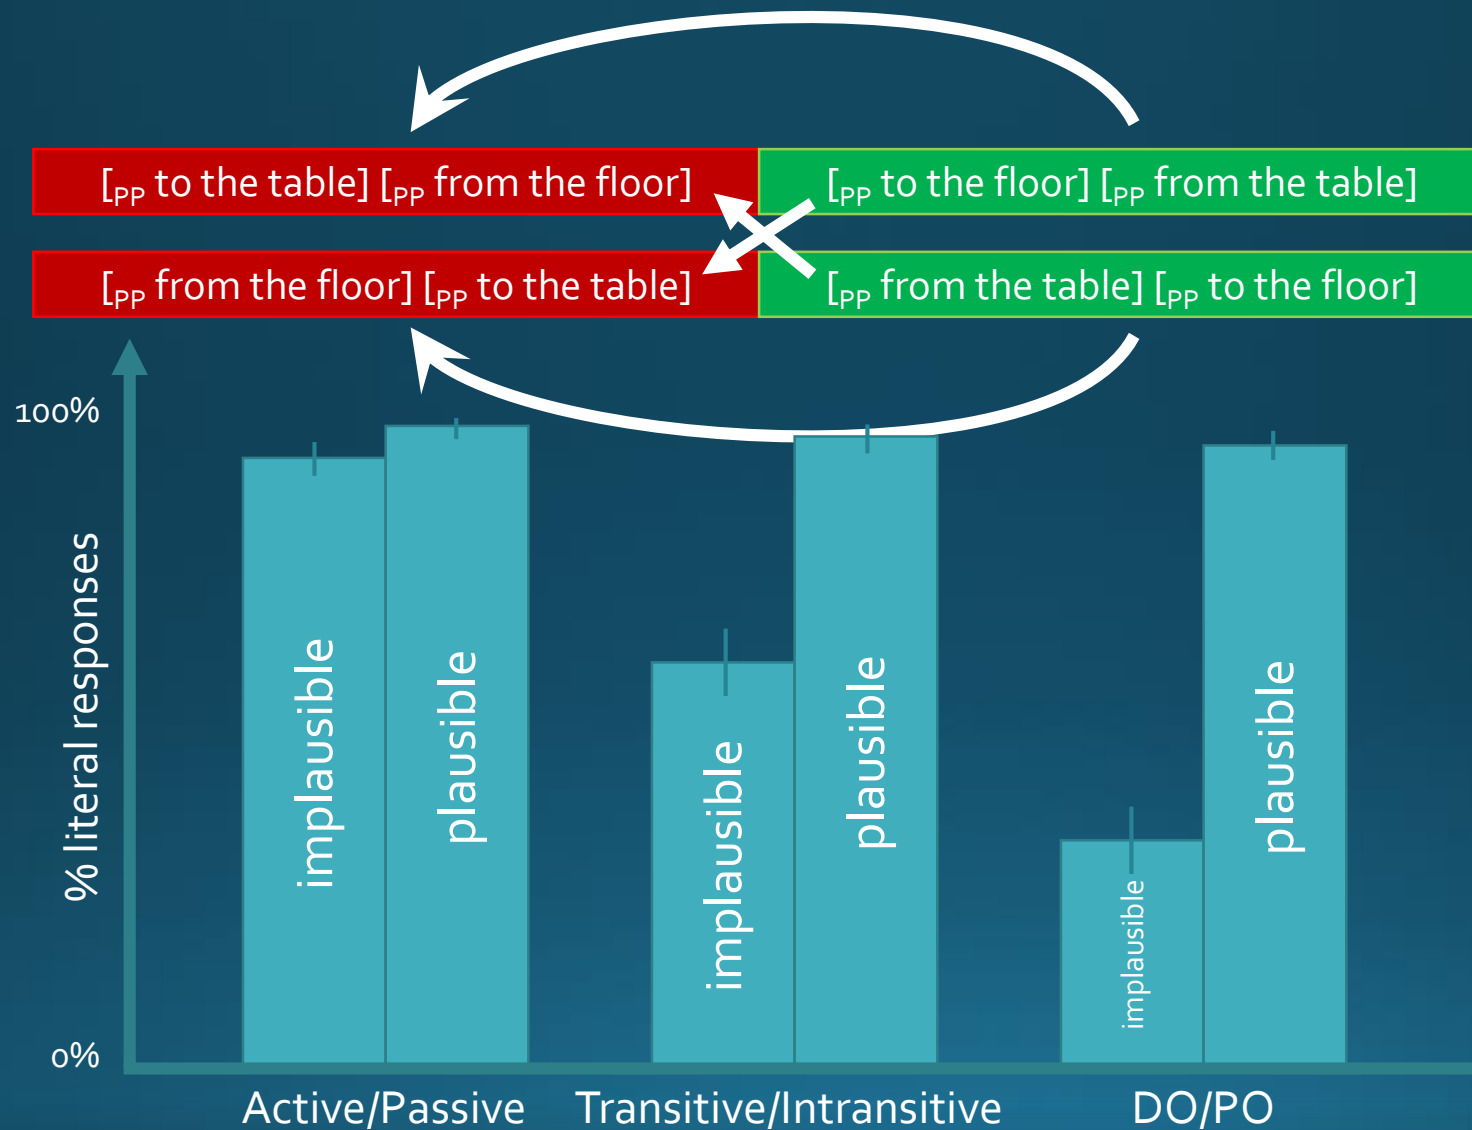

$$P(M|I) \propto \underbrace{P(I|M)P(M)}$$

- Predictions**
1. Noise inference whenever prior probabilities permit ✓
  2. Additive effects of plausibility and canonicity ✓

# Exchange what?

# Exchange what?

## Swapping nouns in active/passive?

The ball **was** kicked **by** the girl.

[<sub>PP</sub> to the table] [<sub>PP</sub> from the floor]

[<sub>PP</sub> to the floor] [<sub>PP</sub> from the table]

[<sub>PP</sub> from the floor] [<sub>PP</sub> to the table]

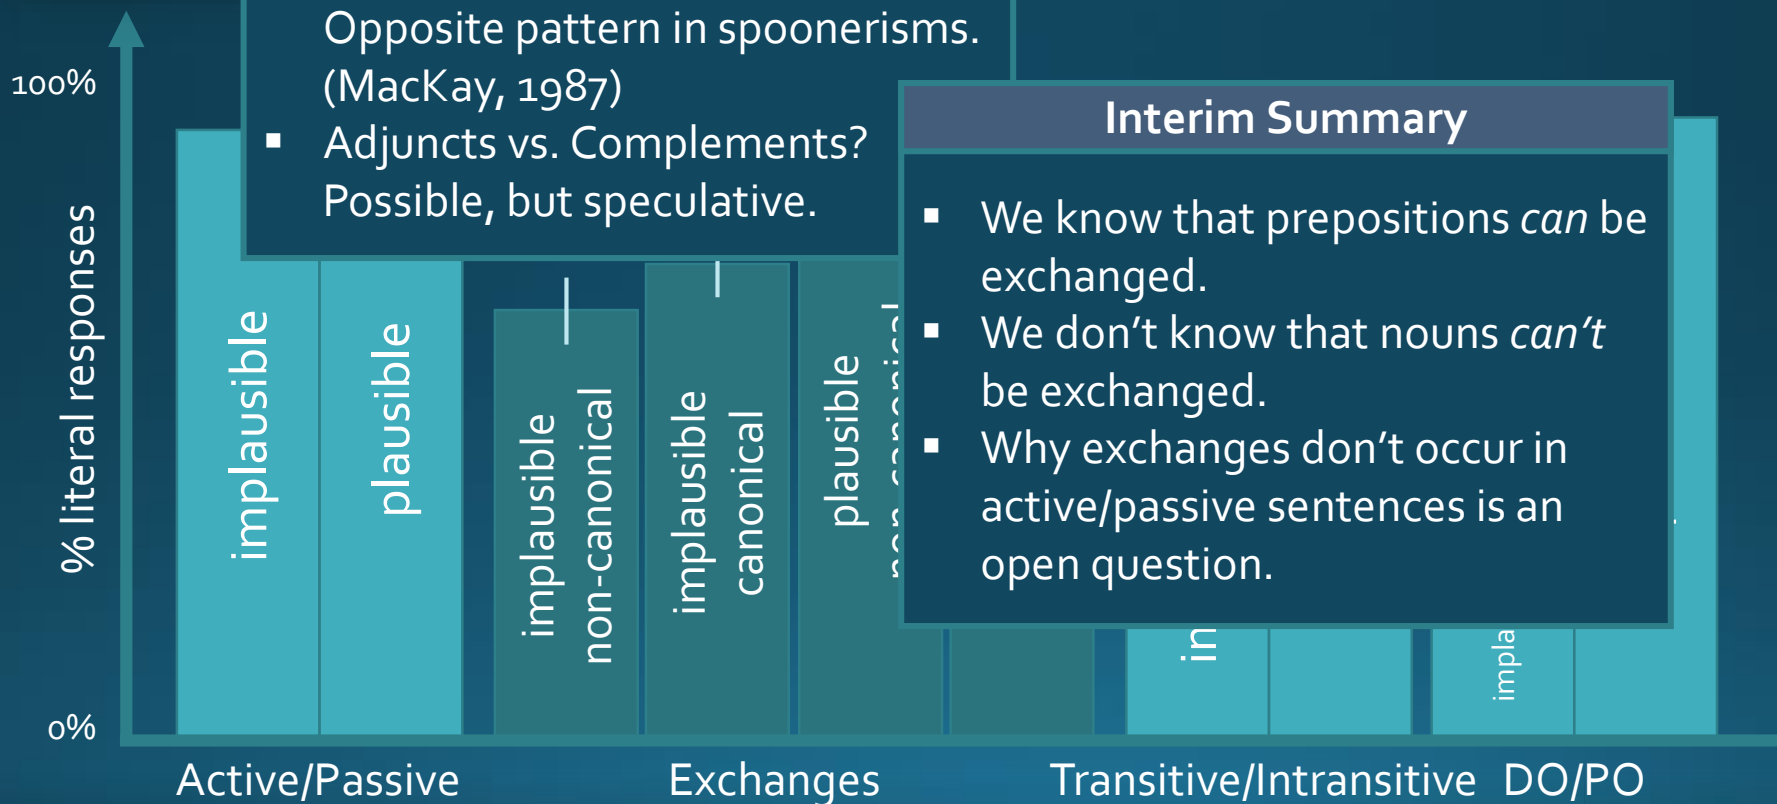

[<sub>PP</sub> from the table] [<sub>PP</sub> to the floor]

## What's the difference?

- Function vs. content words?  
Opposite pattern in spoonerisms. (MacKay, 1987)
- Adjuncts vs. Complements?  
Possible, but speculative.

## Interim Summary

- We know that prepositions *can* be exchanged.
- We don't know that nouns *can't* be exchanged.
- Why exchanges don't occur in active/passive sentences is an open question.

## 2 common concerns

1. Do people REALLY consider all conceivable interpretations during language comprehension?

“That’s not the right kind of process, intuitively.”

“That’s not a computationally feasible mechanism.”

## 2 common concerns

1. Do people REALLY consider all conceivable interpretations during language comprehension?

“That’s not the right kind of process, intuitively.”

“That’s not a computationally feasible mechanism.”

## 2 common concerns

Marr (1982)

“In order to understand **bird flight**, we have to understand **aerodynamics**; only then do the structure of feathers and the different shapes of birds’ wings make sense.”

1. Do people REALLY consider **all conceivable interpretations** during language comprehension?

“That’s not the right **kind of process, intuitively.**”

“That’s not a **computationally feasible mechanism.**”

2. If we open the door to non-literal interpretations, does that mean that anything goes? What about:  
“**The cat is on the mat.**”

# Conclusion

- Noise inference occurs whenever (and to the extent that) literal interpretations are unlikely
- Replicated results with *active/passive*, *transitive/intransitive*, and *DO/PO* materials
- Comprehenders undo **exchange errors**
- Utterance priors driven by *content* and *form*

Comprehenders' **noise model** exhibits  
Structure sensitivity!

Thank you.

# Exchange Results
